Year of birth: 2003 | Female

PROFESSIONAL SUMMARY

.NET Developer with **2 years of hands-on experience** building ERP systems across **three platforms simultaneously** — Windows desktop (WinForms), web (ASP.NET MVC + Kendo UI), and mobile (React Native). Experienced in the full development lifecycle: UI design, RESTful API development, complex SQL Server stored procedures, and automated report generation (Excel & PDF). Strong grasp of ERP business domains including accounting, HR, purchasing, sales, and manufacturing. Comfortable analysing requirements directly with stakeholders and translating them into working solutions. Increasingly leverages AI coding tools to accelerate development and improve code quality.

TECHNICAL SKILLS

Languages	C#, JavaScript, SQL, HTML, CSS
Frameworks & Platforms	.NET Framework, .NET Core, ASP.NET MVC, ASP.NET Web API, React Native, WinForms
UI & Front-end	Kendo UI, jQuery, React Native, WinForms Controls, HTML/CSS
Database	MS SQL Server — complex queries, stored procedures, functions, triggers, transactions, query optimisation
Data Access	ADO.NET, RESTful API design & integration
Reporting	Aspose.Cells (Excel export, PDF export), Crystal Reports
Auth & Middleware	Middleware pipeline, authentication, role-based authorisation
DevOps & Tools	IIS, Docker, Git, Tortoise SVN, Visual Studio, VS Code, SSMS, Figma, Canva
AI Tools	GitHub Copilot, ChatGPT, Claude — used daily for code generation, SQL query writing, code review assistance, and debugging
Languages	Vietnamese (Native)	English — TOEIC 325 (reading technical documentation)

WORK EXPERIENCE

ASOFT

January 2024 – Present

.NET Developer

ERP9 — Web Application

ASP.NET MVC · Kendo UI · jQuery · SQL Server · ADO.NET · RESTful API · Aspose.Cells

- Designed and built business-process screens (CRUD, search, import/export) for modules including accounting, purchasing, sales, HR, and manufacturing using Kendo UI grids, dropdowns, date pickers, and custom form layouts.
- Developed RESTful APIs consumed by both the web front-end and the mobile app, including request validation, error handling, and response formatting.

- Wrote complex SQL Server stored procedures involving multi-table joins, aggregation, conditional logic, and date-range filtering to support data-heavy screens and reports.
- Implemented automated report generation: pulling data from stored procedures and rendering formatted Excel workbooks and PDF files with Aspose.Cells (cell styling, merged headers, formulas, multi-sheet exports).
- Connected data layers using ADO.NET — parameterised stored procedure calls, DataTable mapping, and transaction management.
- Customised UI components and improved existing screens based on user feedback and changing business requirements.

ERP8 — Desktop Application

WinForms · .NET Framework · SQL Server · ADO.NET

- Built and maintained WinForms screens for data-entry workflows across ERP business modules, including dynamic controls, data binding, and form validation.
- Wrote and optimised stored procedures for retrieving and computing business data, supporting both real-time display and batch reporting needs.
- Fixed bugs and refactored legacy code to improve stability and maintainability.
- Analysed requirements with end-users and business departments to translate workflows into functional screen designs.

ERP Mobile — Cross-platform Mobile App

React Native · RESTful API integration

- Developed mobile UI screens for ERP business flows, enabling field teams to perform lookups and data entry from mobile devices.
- Integrated mobile screens with the ERP9 API layer for real-time data synchronisation.
- Implemented responsive layouts and basic navigation flows using React Native components.

Cross-project contributions:

- Participated in requirements analysis sessions with functional departments (accounting, HR, warehouse) to clarify business rules and map them to technical implementations.
- Used AI coding assistants (GitHub Copilot, Claude) to accelerate stored procedure drafting, API scaffolding, and debugging — reducing routine coding time significantly.
- Reproduced and diagnosed production issues, tracing problems from UI through API to stored procedure logic, and delivered fixes with minimal downtime.

EDUCATION

FPT Polytechnic College — Major: Web Design *August 2021 – December 2023*

INTERESTS

Chess · Swimming · Badminton
